

-  circulatory system process
-  Cardiovascular Diseases
-  Diseases of signal transduction by growth factor rece
-  regulation of kinase activity
-  Prostatic Neoplasms
-  Hypertension
-  Coronary artery disease
-  VEGFA-VEGFR2 signaling
-  Myocardial Infarction
-  enzyme-linked receptor protein signaling pathway
-  response to inorganic substance
-  metal ion transport
-  TGF-beta signaling pathway
-  response to growth factor
-  regulation of secretion
-  protein phosphorylation
-  regulation of MAPK cascade
-  Cellular senescence
-  positive regulation of cell migration
-  DNA damage response (only ATM dependent)
